- \* Configuring WebSphere Application Server on multiple platforms for both horizontal and vertical scaling for Work Load Management.
- \* Collection of JVM statistics, garbage collection data for monitoring the heap and physical memory.
- \* Assembled and Deployed the application in staging, in productions, following change management practices and 24/7 support, worked in shifts.

**Project** : **Telstra TeleCommunications**  
**Client** : **Telstra TeleCommunications, Australia.**  
**Role** : **WebSphere Administrator**

**Description:**

Telstra is Australia's leading telecommunications and information services company. It offers a full range of services and competes in all telecommunications markets throughout Australia, providing more than 9.86 million Australian fixed line and more than 8.9 million mobile services. Vision is to do for customers what no one else has done: create a world of 1 click, 1 touch, 1 button, 1 screen, 1 step solutions that are simple, easy and valued by individuals, businesses, enterprise and government.

The FICM Mediator is an integration service layer positioned between the BSS and OSS layers. The Mediator exposes services to BSS to support their business events. Furthermore, the Mediator uses BSS exposed services and existing contracts with the legacy applications to implement changes in downstream systems to fulfill these requests from BSS.
